A.C. Delay MK II

25X1

PROJECT INSTALLED ----- May 6, 1959  
DATE OF THIS INSPECTION ----- December 7, 1959

## MARK I

General Fouling Description

Most of the test unit moderately encrusted with the following fouling organisms:

1. Barnacles
2. Annelids
3. Mollusks
4. Encrusting and filamentous bryozoa
5. Hydroids

General Note:

At the time of installation, it was noted that the paint coating had peeled over a considerable area of the specimen, mostly at the hex head and middle cylinder areas. The hex-head end of the cylinder showed metal blemishes, indicating that the specimen had been clamped in a vise or similar clamping device.

## MARK II

General Fouling Description

1. Barnacles
2. Mollusks
3. Annelids
4. Encrusting and filamentous bryozoa
5. Hydroids

General Note:

At the time of installation, many minute "blow-holes" were noted in the top center of screw cap.
